# Data Workshop on Monitoring and Evaluation of PC-NTD Programmes DAY 2

Brazzaville, 12 – 16 August, 2024

### Wrap up Day 1

South Sudan team

- Dr Julia Sube
- Dr Thok Chol Machuoch Mum
- Dr Moses Mila Peter

#### **Presentations:**

- ☐ Presentation of Joint Application Package (JAP) System presented by Honorat M Zoure and mentioned about the join requisition selected PC Medicine:
- ✓ JRF Within 3 months after last MDA
- ✓ JRSM At least 9 months before the first date of MDA planned
- ✓ EPIRF Submitted as soon as at specific survey was completed (ESPEN)

### Key take away:

Setting up and maintaining effective coordination mechanisms and processes for JAP completion and submission.

#### **Presentation**

☐ SWOT Analysis on JAP experiences

Key take away:

- Strong interest in finding ways to be able to automate pushing data from HMIS / DHIS2 / NTD databases to JAP.
- To this aim, having standardized lists of priority data elements to be digitized would be useful.
- strong interest in refining submission and approval process to allow for more transparency and defined user access roles
- Discuss further on definition of effective round of MDA (Geographical and treatment coverage)
- SCH sub-district analysis to be reviewed per country.

### Thank you

# Forecasting & Supply Planning Overview

Sarah Andersson
Project Director – Supply Chain Technical Support
Mechanism Project

### Objectives

- Provide overview of forecasting and supply planning best practices
- Discuss applicability of these approaches to NTD Programs

### Quantification

Quantification is the process of estimating the quantities and costs of the products required for a specific health program (or service) and determining when the products should be delivered to ensure an uninterrupted supply for the program. It comprises two parts:

**Quantification** = Forecasting + Supply Planning

### Forecasting and Supply Planning

**Forecasting** consumption - **estimating the quantities of products** that will be dispensed / administered to patients or community members, or used by a health program over a specific period of time in the future.

**Supply Planning** - determine **what quantities** of products need to arrive **by when** to support programmatic plans, taking into account current stock on hand, quantities already on order, supplier lead times and costs.

**Quantification = Forecasting + Supply Planning** 

### Forecasting Consumption

Definition of Consumption - quantity of goods actually given to patients or community members for intended purpose.

### Types of consumption

- Qty tablets dispensed to patients
- Number of tablets given to community members during an MDA
- Qty of supplies used for treating patients or testing people

### Different forecasts for different users

#### **Stakeholders**

|   | Manufacturers   | Donors                            | Procurers   | Governments  | Global Health<br>community                            |
|---|---|-----------------------------------|---|--|---|
| Short term<br>forecasts<br>(0-18 month) | Inform production (shifts, final product customization, ordering of inputs)   | Funding needs and<br>disbursement | Tendering, budgeting,<br>freight/distribution<br>planning, coordination | Disbursement of funds,<br>campaign and<br>distribution planning  | Planning, informing<br>activities and related<br>work |
| Medium term<br>forecasts<br>(1-5 year)  | Inform management decisions -<br>production planning (staffing,<br>inputs, API, capacity optimization),<br>supplier relations/negotiations,<br>budgeting      | Investment decisions              | Contract negotiations,<br>resource planning,<br>budgeting               | Planning for program<br>needs (and related<br>costs, resource needs),<br>budgeting, resource<br>mobilization | Research, advocacy,<br>planning, etc.                 |
| Longer-term<br>forecasts<br>(5-20 year) | Strategic forecasts to inform<br>resource planning:<br>- capital expenditures<br>- facility/capacity investments<br>- regulatory efforts<br>- R&D investments | Planning, budgeting,<br>advocacy  | Planning, budgeting   | Planning, budgeting  | Research, advocacy,<br>planning, etc.                 |

What is the purpose of forecasts for NTD supplies? Do we need short term,

medium term or long term forecasts?

### Purpose of country forecasting and supply planning

- Estimating needs for products to support programmatic plans (quantities)
- Budgeting and resource mobilization (funding)
- Planning orders and procurements
- Supply planning (timing, buffer stock to account for demand uncertainty rounding up for distribution, and wastage)
- Preventing or correcting supply imbalances

### **Short Term Forecasts**

Example: JRSM = Short term forecast

 Purpose is for requesting required quantity donation products for the following year

### Medium to Long Term Forecasts

#### Longer-term forecasts at country level could:

- Empower NTD Programs with information to plan and advocate
  - Some NTD donation programs target specific population subgroups (e.g. SAC, WRA, etc.), yet the need extends beyond these subgroups, forecasting the full need allows programs to advocate and plan
  - Non-donated NTD supplies also require advocacy and planning for budget and procurement processes (e.g. tendering), long term forecasts provide the data to support these activities
  - If donor support and funding for NTD commodities decreases, there may be a transition to government-led procurement
- Be shared with global level (pharm partners) to support production planning and enable pharmaceutical companies to better respond to country requests
- Forecast potential changes in commodity needs due to changes in epidemiology and treatment guidelines for PC and case management which could results for large and rapid shifts in future demand

# Standard Country Approach to Quantification

### Step 1 - Preparation

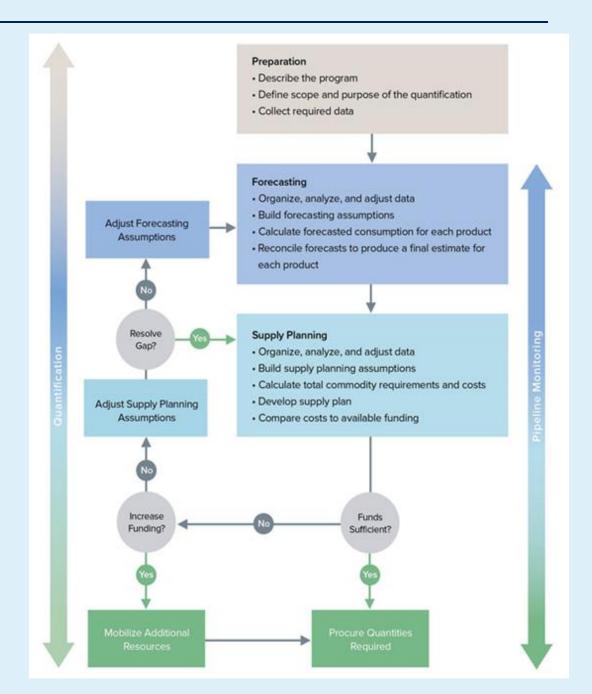

define the scope, describe the program and collect required data

### Step 2 - Forecasting

 estimate the quantity of each product that will be consumed (dispensed or utilized) during each year

### Step 3 - Supply Planning

- determine what quantities of products need to arrive by when to support programmatic plans
- consider lead times, inventory levels, buffer stock
- twelve to eighteen months and updated on a rolling basis

# Preparation: Describe the program

#### **Current Status**

- MDA and survey plans
- Program goals, strategies and priorities
- National policies on standard treatment guidelines, testing algorithms, dispensing protocols
- Expansion plans, planned introduction of new products, changes in service delivery mode

#### **Future outlook**

- Changes in any policies that might affect NTD interventions? Changes to disease control or elimination guidelines?
- Planned surveys that might identify changes in endemicity?
- Funding for implementation of interventions or surveys?
- Introduction of new products?
- Training of health providers increasing capacity?
- Changes in government or funding levels for commodities?

#### Preparation

- Describe the program
- Define scope and purpose of the quantification
- Collect required data

### Preparation: Define the scope and purpose

#### Where:

Defined target populations

Geographical regions, IUs

#### Why:

For JRSM

For longer-term budgeting or advocacy

#### What:

Specific list of products to be quantified

#### When:

Timeframe of the quantification, period of time to be covered & to be revised

#### Who:

Stakeholders –

Disease and programmatic experts

Supply chain experts

Implementing partners supporting activities that use products to be quantified

#### Preparation

- Describe the program
- · Define scope and purpose of the quantification
- Collect required data

# Preparation: Collect required data

#### **Data for Forecasting**

- Demographic/Epidemiological data
- Consumption data (historical)
- Services data

#### **Data for Supply Planning**

- Stock on hand / inventory
- Quantities on order
- Expected consumption for current year MDAs
- Procurement and supplier lead times
- Buffer stock
- Storage space available
- Funding available for procurement (if ordering products not supported by donors)

#### Preparation

- Describe the program
- Define scope and purpose of the quantification
- · Collect required data

### Forecasting Process

- 1. Organize, analyze, and adjust data
- 2. Build forecasting assumptions
- 3. Calculate forecasted consumption for each product
- 4. Reconcile forecasts to produce a final estimate for each product

- · Organize, analyze, and adjust data
- Build forecasting assumptions
- Calculate forecasted consumption for each product
- Reconcile forecasts to produce a final estimate for each product

# Types of Forecasting Data & Sources

- Demographic/morbidity data
  - Population characteristics and estimates (census)
  - Epidemiological surveillance studies
- Historical consumption data
  - Consumption reports (number of tablets administered) from past campaigns (LMIS)
- Historical services data
  - MDA summary reports on number of treatments from past campaigns, past coverage (HMIS)
- MDA plans, funding, and targets
  - Number of workers trained to conduct campaigns,
  - projected funding, coverage goals

- · Organize, analyze, and adjust data
- · Build forecasting assumptions
- Calculate forecasted consumption for each product
- Reconcile forecasts to produce a final estimate for each product

# Building and Documenting Assumptions

What is an assumption?

Adjust historical program data when it is of poor quality (incomplete, outdated, unreliable, or unavailable) and also for predicting changes due to future program plans

How to build assumptions?

The assumption-building exercise should be a consultative process involving program planners, clinical experts, pharmacists, procurement specialists, and warehouse managers. Ideally during a quantification workshop, sufficient time for clarifying, agreeing upon, and documenting assumptions.

Why we document assumptions?

When building assumptions, the sources of information and inputs should be documented and the quantification should be revised if any of the assumptions change.

- · Organize, analyze, and adjust data
- · Build forecasting assumptions
- Calculate forecasted consumption for each product
- Reconcile forecasts to produce a final estimate for each product

### Forecasting Methods

- Using demographic /morbidity data
  - eligible IU population x dosage
  - incidence x dosage
- 2. Using consumption data
  - past consumption trends
- 3. Using services data
  - past cases x dosage

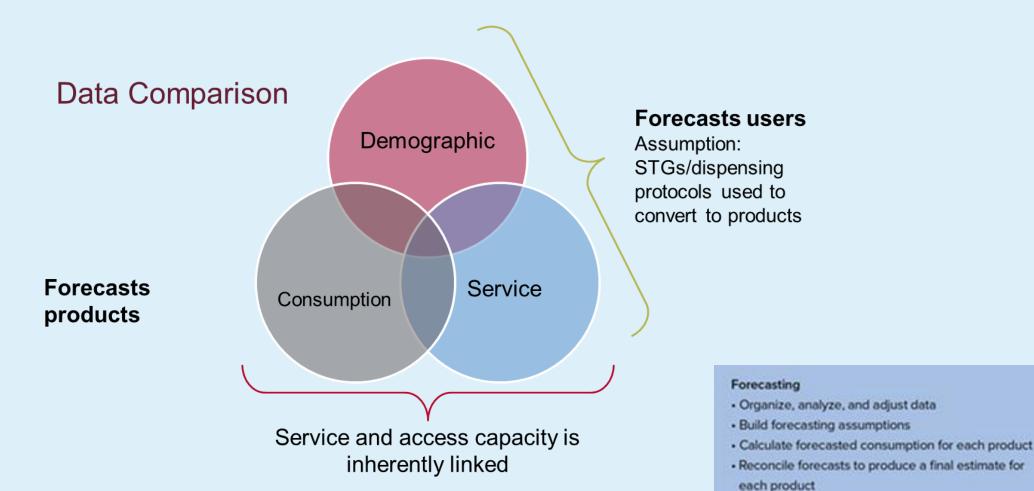

# What type of methodology is used in the JRSM?

Demographic forecast
Eligible Population x Number of Rounds x
Dosage

- · Organize, analyze, and adjust data
- · Build forecasting assumptions
- Calculate forecasted consumption for each product
- Reconcile forecasts to produce a final estimate for each product

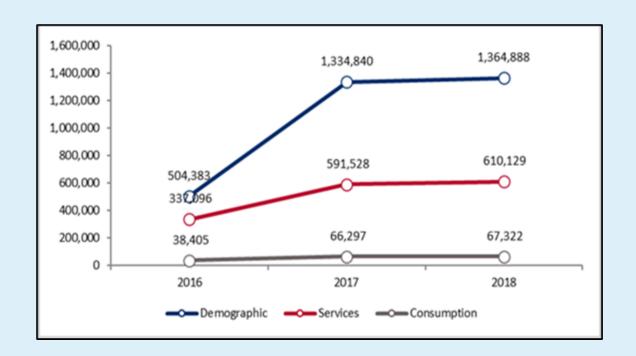

### Compare multiple forecasts

# Steps in Reconciling Forecasts

- Analyze differences between the forecasts
- Analyze strengths and weaknesses of the different forecasts
  - Data completeness missing data, stock outs
  - Data timelines how recent is the data
  - Data source methodology quality
- Determine a final forecast using any one forecast method or a combination of methods
- Document reasons to justify your final determination

- · Organize, analyze, and adjust data
- · Build forecasting assumptions
- · Calculate forecasted consumption for each product
- Reconcile forecasts to produce a final estimate for each product

### Purpose of Supply Planning

- To determine when it is best to receive the shipments/orders
- To ensure that there are adequate stock levels of supplies in the program
- To prevent overstocking or stockouts

#### Supply Planning

- · Organize, analyze, and adjust data
- · Build supply planning assumptions
- · Calculate total commodity requirements and costs
- · Develop supply plan
- Compare costs to available funding

# Calculate total product requirements

### Determine the quantity of each product needed to:

- Meet the forecasted consumption
- Ensure that the in-country supply pipeline has adequate stock levels to maintain continuous supply to SDPs

Estimate of total commodity requirements for forecast period

product needed to meet forecasted consumption

+

#### Additional quantities for

- procurement and supplier lead times
- buffer stocks
- product may expire before it is used

Stock on hand and quantity on order

#### Supply Planning

- · Organize, analyze, and adjust data
- · Build supply planning assumptions
- · Calculate total commodity requirements and costs
- Develop supply plan
- Compare costs to available funding

### Supply planning tool allows month by month monitoring

Select start date: 1-Jun-2023

1st MDA estimated need: 1st MDA date: 1-Oct-2023

# Monitoring the Forecast & Supply Plan

Quantification is not a one-time annual exercise but an iterative process which includes reviews and updates required year-round.

### Monitoring the Forecast & Supply Plan

- Review and update the quantification every six months, more frequently for programs that are scaling up services
- Review actual consumption data and update forecasting assumptions as needed
- Recalculate product requirements and costs
- Mobilize additional resources if needed
- Adjust procurement quantities and shipment delivery schedules as needed to avoid stock imbalances

### **Discussion Questions**

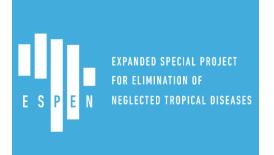

- 1. Why do we create forecasts for NTD supplies? What is the purpose?
- 2. How is quantification different from an MDA plan? Which comes first?
- 3. Could different forecasting methodologies apply to different categories of NTD commodities?
- 4. How could the process of quantification presented here support quantification for NTD commodities including the preparation of JRSM?
- 5. Is there value in creating longer term forecasts (3 to 5 years)?

THANK YOU
MERCI BEAUCOUP
OBRIGADO

### **Forecast Accuracy**

Senior Advisor – Supply Chain Technical Support
Mechanism Project

# Calculating Forecast Accuracy

One of the simpler and more common methods is called the **Mean Absolute Percentage Error or MAPE.** It is calculated by taking the absolute different between the forecast and the actual (absolute means without regard to direction) and dividing it by the actual demand or consumption.

# **Example Forecast Accuracy**

|              | forecasted<br>consumption (1<br>year) | actual<br>consumption (1<br>year) | MAPE   | Accuracy |
|--------------|---------------------------------------|-----------------------------------|--------|----------|
| Mebendazole  | 4,388,340                             | 3,844,687                         | 14.14% | 85.86%   |
| Praziquantel | 7,863,900                             | 7,819,280                         | 0.57%  | 99.43%   |

| MAPE            | Interpretation              |
|-----------------|-----------------------------|
| <10             | Highly accurate forecasting |
| 10-20           | Good forecasting            |
| 20-50           | Reasonable forecasting      |
| >50             | Inaccurate forecasting      |

# Small Group Discussions Question: modelling ideal vs. realistic forecasts

- Question 1: What factors cause uncertainty in forecast numbers year to year?
- Question 2: What are other challenges in getting accurate forecasts for NTD commodities especially PC-NTDs?
- Question 3: How can we address challenges in forecast accuracy?

# Challenges in getting accurate forecasting for NTD Commodities especially PC-NTDs

- Lack of inventory data from all levels, challenges with collect reverse logistics data
- Funding uncertainty for MDAs and Surveys
- Current forecasting methodology does not account for different coverage levels
- No inclusion of expected wastage or safety stock adjustments
- Lack of motivation
- Conflict, insecurity
- Natural disasters
- More?

# Small group discussions on challenges and opportunities for forecasting

## Guidelines for Working Groups

**Objective Clarification**: Give inputs into the challenges of forecasting accurately, challenges in logistics management information systems, and provide inputs for three forecasting methodology

**Group Roles**: Assign specific roles within each group, such as a <u>facilitator</u>, and a <u>note-taker</u> to ensure a structured discussion and effective reporting. There will **be three separate discussion sessions** during the day. Be sure to only focus on the questions that are in discussion for that session, do not move to discussion questions for the next sessions.

**Time Management**: Keep track of time for each question. This will help keep the discussion focused and balanced.

#### **Focus Areas:**

- 1. Forecasting accuracy challenges and opportunities slide 3
- 2. LMIS challenges and opportunities slide 4
- 3. 3-year forecasting methodology slide 5, 6 and 7

**Reporting Back:** Each group should prepare to present their answers to the larger group. Encourage them to highlight the most critical issues and realistic solutions.

Question 1: What factors cause uncertainty in forecast numbers year to year?

**Question 2:** What are other challenges in getting accurate forecasts for NTD commodities especially PC-NTDs?

**Question 3:** How can we address challenges in forecast accuracy?

Groups presenting results of Session 1: Forecasting accuracy – challenges and opportunities

## **Group 1 – Challenges & Opportunities**

**Question 1:** What factors cause uncertainty in forecast numbers year to year?

3 methods for calculation: demographic, consumption, service

Incorrect/inaccurate census/population, due to old data, migration (internal/international)

Quality of historic data: literacy limitations in data collections/collectors, insufficient funding for previous year(s) results in inaccurate proxy of need

Insufficient funding results in incomplete consumption of previous stock (long budget cycles exacerbate)

Cross-border concerns resulting from differing support and activities (donors/implementing partners)

Ensuring proper maintenance (incl cold chain) of meds

Seasonality/weather changes

Insecurity

Availability/supply chain/stock management and inventory

**Question 2:** What are other challenges in getting accurate forecasts for NTD commodities especially PC-NTDs?

Population data

Endemicity

Lack of funding for prevalence surveys

**Question 3:** How can we address challenges in forecast accuracy?

Break funding down to indicate timing, more localized

Sufficient, timely, and reliable funding

Accurate population figures, explore usage of alternative sources, e.g. schools

Country-specific feedback loop on previous requests

Improved formulas for forecasting, including more factors, testing for accuracy

Ensure consumption data is complete

Review previous-year forecasts and identify the drivers of inaccuracy (trend analysis)

Cross-border collaboration, e.g. with neighbors that share moving populations

Targeting areas with known population fluctuation

## **Group 2 – Challenges & Opportunities**

# Question 1: What factors cause uncertainty in forecast numbers year to year?

#### **POPULATION**

- Migration
- Redistricting
- Government population predictions can be lower than the reality.
- Partner forecast
- JRF and data sent to partners can have different population
- Government policies
- Donor forecast

#### INPUT ACCURACY

- Accuracy of previous forecast
- Challenges as you move between methodologies.
- Accuracy/reliability of the inventory (stock balance)
- Different treatment strategies in country to WHO.
- Survey results (e.g. Endemicity status, particularly for sub-districts with SCH.)
- Assumed average dose

#### **CAPACITY**

- Central stores managing drugs, rather than programs.
- Capacity of country to do the forecasting

# Question 2: What are other challenges in getting accurate forecasts for NTD commodities especially PC-NTDs?

Looking specifically at tactors which effect the timing of MDA:

- 1. JAP approval timelines
- 2. Insecurity
- 3. Obtaining results of MDA
- 4. Timing decisions, e.g. school closures, avoid Ramadan, etc.
- 5. Financial arrangements with Partners
- 6. Shelf-life of available drugs may have to do MDA sooner.

## Question 3: How can we address challenges in forecast accuracy?

#### **POPULATION**

- 1. Review previous forecast
- 2. Integrate with other stakeholders, bring them together and discuss the population data, micro-planning
- 3. Ensure the survey results are carried forward into treatment strategy.
- 4. Stand alone populations, ie refugee camp should be looked at separately.

#### **CAPACITY**

- 1. Involve partners more in the forecasting.
- 2. Training for in-country forecasters

Question 1: What factors cause uncertainty in forecast numbers year to year?

- Population movement (eg intra-country) creates problems in being able to forecast accurately at the IU level; if people are moving from one district to another and we cannot predict how many are moving, that is an issue
- When it comes to Study Planning, unreliable/ unpredictable funding levels can present a challenge in projecting required amounts
- Changing demographics or inaccurate demographics based on older vintage censuses can cause inaccurate forecasts

  Question 2: What are other challenges in getting accurate forecasts for NTD commodities especially PC-NTDs?
- Use of outdated epidemiological survey data, not taking into account the fact that prevalences may have shifted in the mean-time
- Weak supply chain management systems that do not have an accurate handle on inventories counts needed in Study Planning
- Redistricting can affect endemicity status for parts of districts (eg, some parts of district may be endemic and require
  treatment for SCH, while others are not); Overall, this may result in throwing off total amount required if the preredistricting geography is erroneously assumed in forecasting
- Limited skills within NTDP in planning and forecasting

#### **Question 3:** How can we address challenges in forecast accuracy?

- Better overall coordination and planning. For example, cross-border meetings with a view to reconciling numerators and denominators in cases where there is cross-border movement
- Promote data sharing. For example, if another program has done a high-quality census before the campaign (eg, Malaria), encourage its use
- If funding is available, conduct a pre-MDA (CDD) census
- Advocate for the provision of short, medium, and long-range sub-national funding availability data for MDA distribution to assist with forecasting and planning
- Enact routine monitoring consumption versus forecasting data as a mechanism for improvement of forecasts for following years
- Capacity enhancement / training of NTDP personnel in areas of forecasting and planning (SCM) is essential

## **Groupe 4 – Défis et Opportunités**

**Question 1**: Quels facteurs provoquent des incertitudes dans les chiffres des prévisions d'une année à l'autre ?

- Les conflits;
- Les catastrophes naturelles ou provoquées;
- L'insécurité;
- Urgences sanitaires (Les épidémies et les endémies);
- Absence des données démographiques fiables;
- Absence des données d'endémicités ressentes .

**Question 2**: Quels sont les autres défis pour obtenir des prévisions précises pour les produits NTD, en particulier pour les PC-NTD ?

- Avoir des données fiables en matières de traitement de masse et d'enquêtes;
- Maitrise des endémicités à tous les niveaux;
- Système de logistique inverse performant;
- Absence des données sur la recrudescence de la maladie dans les zones ou le TDM a été arrêté(efficacité du système de surveillance);
- Redécoupage sanitaire;

Question 3: Comment pouvons-nous relever les défis liés à la précision des prévisions ?

## **Groupe 5 – Défis et Opportunités**

**Question 1**: Quels facteurs provoquent des incertitudes dans les chiffres des prévisions d'une année à l'autre ?

- 1. Dénombrement/chiffres des prévisions;
- 2. Rapportage des stock précédents;
- 3. Mouvement de population

**Question 2**: Quels sont les autres défis pour obtenir des prévisions précises pour les produits NTD, en particulier pour les PC-NTD ?

- 1. Disponibilité des ressources financières;
- 2. Retards dans les délais de livraison;
- 3. Insuffisance de capacite (ressources humaines, outils);
- 4. Accès limite a des outils de suivi des intrants;
- 5. Insuffisance d'infrastructure adéquate de stockage;
- 6. Circuit parallèle d'approvisionnement pour certains pays;

Question 3: Comment pouvons-nous relever les défis liés à la précision des prévisions ?

- 1. Securiser les ressources financieres necessaires a l'approvisionnement;
- 2. Soumettre les JRSM a temps avec des donnees completes et renforcer le suivi de la production et de la livraison des medicaments;
- 3. Renforcer les capacite en ressources humaines et impliquer tous les acteurs de la chaine d'approvisionnement;
- 4. Developper des outils de suivi de intrants (Commande livraison utilisation);
- 5. Ameliorer les capacities de stockage et la gestion des stocks;
- 6. Integrer les produits des MTNs sur le circuit national;
- 7. Renforcer le suivi de l'utilisation des medicaments et la logistique inverse;
- 8. Documenter les sources de variation des donnees de population;

## **Coffee Break**

# Logistics data needed for forecasting

Matiko Machagge Senior Advisor – Supply Chain Technical Support Mechanism Project

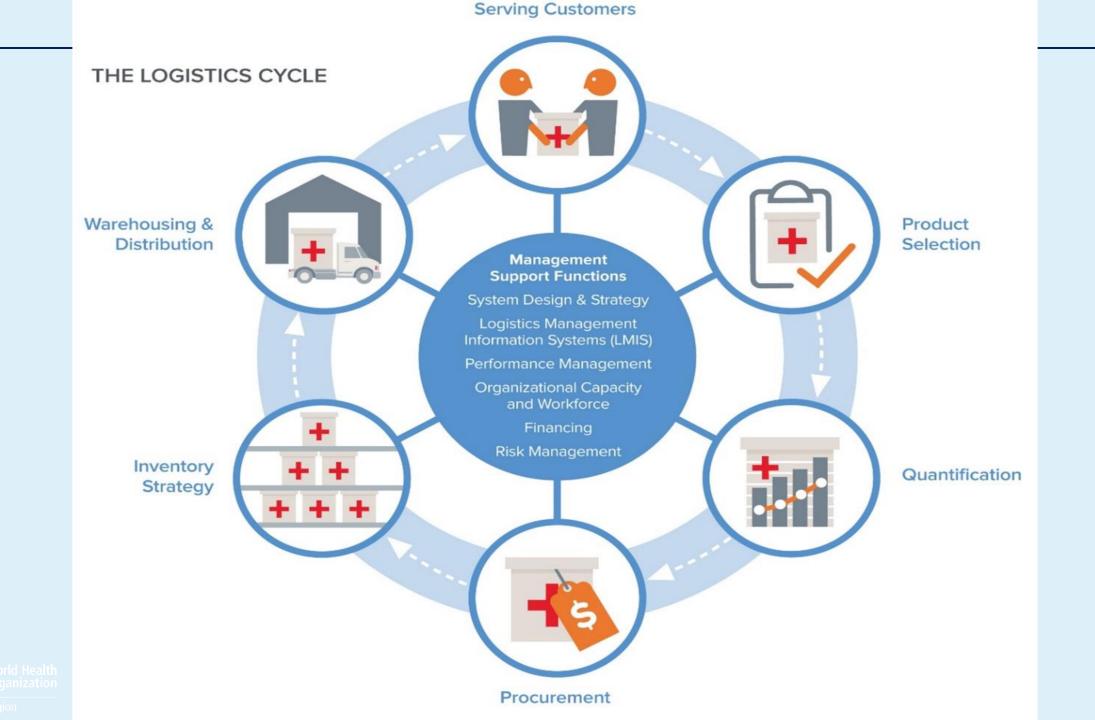

## Logistics Data for Forecasting and Supply Planning

| Data Item   | Definition  |
|---|---|
| Consumption data (historical)                           | Quantity of stock dispensed to users or used during a particular time period (treatments)   |
| Issues Data (ideally should not be used in forecasting) | Quantity of stock shipped from one level of the system to another, e.g. stores to facility  |
| Stock on hand / inventory                               | Quantity of usable stock available (with expiry dates)  Note: Items that are expired or damaged are not considered part of stock on hand; they are considered losses to the system. |
| Quantities on order (in pipeline)                       | Quantity of stock on order and expected delivery date   |
| Expected consumption for current year MDAs              | Quantity of stock expected to be used or consumed before the forecasted quantity will be received   |
| Organization  All ar Losses                             | Quantity of stock that expired or was damaged during a particular time  |

## Other data needed for forecasting?

- Population data census, microplanning
- Case data HMIS
- Prevalence and incidence of disease surveillance, surveys
- Funding available
- Program plans
- Others?

## **LMIS**

An LMIS can be a system of paperbased and technology-based

records and reports that supply chain workers and managers use to collect, organize, present and use logistics data collected at all levels of the system.

#### ROLES

#### MOH Central

- Forecast needs
- Allocate central funds
- Supervise

#### Central & Zonal Medical Stores

- Procure
- Store
- . Receive & enter orders
- Distribute

#### Hospitals

- Serve clients
- Prepare hospital orders & funding

#### Districts

- Review & approve dispensary and health center orders
- Aggregate data from individual orders in Form XA2
- Allocate local funds
- · Deliver to facilities
- Store supplies in transit

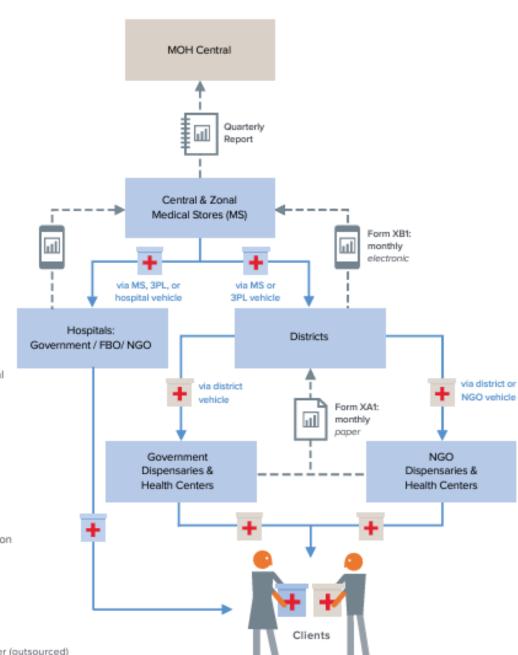

#### Dispensaries & Health Centers

- Review & approve dispensary and health center orders
- · Serve clients
- Record consumption information
- Prepare orders
- Collect local funds

3PL: Third Party Logistics provider (outsourced)

## Standard LMIS Forms

#### **Records**

- Stock keeping records
  - . Inventory Control Cards
  - . Stock cards
- Transaction records
  - Receipts, invoices
- Consumption records
  - Registers, tally sheets

### **Reports**

- Summary Report
  - Submitted routinely to account for what has been used, lost or damaged and sometimes to request more medicines

# Stock keeping Records

|       | INVENTORY CONTROL CARD   |                            |                      |                    |                |             |                     |          |  |  |  |  |  |  |

|   |                                 |            | 1                               |                                  |                                 | I              | I       | 1                       | I                       |                            |                            | 1                                     | 1                         | · •                    |

# Electronic LMIS (eLMIS)

# Practical examples: Country presentations on eLMIS integration

# **eLMIS in the Context of NTDs Program: Mozambique experience**

Dr Norinha Chitimela Banze Mozambique NTD Programme

#### **Experience with eLMIS**

- The eLMIS used by CMAM, both MACS and SIMAM, dates back to 2009, before then paper based and EXCEL based system were in use
- Since then several updated versions of both system have been launched
- SIGLUS has been adopted around 2014-2015 mostly for health centres, and is in the process of being phased out and replaced by M-SIMAM the latest SIMAM version
- CMAM system are used throughout the year to drive routine medicine logistics operations
- The main uses of eLMIS for NTD program is for applying for DTN drugs, and initiating and tracking information regarding MDA distribution processes, and facilitating information sharing between the DTN program, WHO, ITI and Central Medical store, and assist in decision making
- Applications under medical store are connected to a central database and facilitate connectivity and visibility within CMAM
- There in no connectivity with applications used for quantification/forecasting and applying for NTD-drugs

## Summary of tools available as part of LMIS

|  |  | Purpose of tool  |   | Utilization rate   |
|--|--|--|---|--|
| Health facility catchment areas  | Stock cards Excel based Balanced stock cards   | Record received, used, and returned leftover medicines daily during the campaign                                       | Number of tablets received, used, and returned leftover   | Used in all facility catchment areas during MDA                      |
| Health Facility, District<br>Depots, Provincial Depots   | SIGLUS / M-SIMAM –<br>Application Linked to<br>Central Database  | Receiving; Cycle-Count Inventory Control Issuing, receiving left over stock from reverse logistics                     | Opening balance, qty received, qty used, adjustment, Physical Count   | Used in all health centres,<br>District Depots, Provincial<br>Depots |
| Central Medical Store<br>(CMAM)  | MACS –Warehouse Management System/ Interface for requisitions/ Interface for Procurement –Linked to Central Database | Manage order fulfillment process, facility processes, and replenishment processes for routine medicines (Via Classica) | Data include Supplier information, product, inventory status information, transactional data, customer information, | Used in central warehouse  |
| TND program  | ESPEN –OMS Email of EXCEL based form for Zithromax application, Trachoma Elimination Monitoring                      | Quantification & forecasting and applying for (IVM, ALB, PZQ); Zithromax   | JAP inputs including PC-<br>NTD drugs including<br>istock levels  | DTN-Program  |
| UHC/UCN DE LA COMPANIA DEL COMPANIA DEL COMPANIA DE LA COMPANIA DE | Form (TEMF)  |  |   | World Health<br>Organization   |

#### **SWOT** analysis

#### Strengths

- Assigned specific SKU-Code for DTN drugs
- Inventory visibility within CMAM
- Communication between CMAM and DTN program

#### Weaknesses

- Manual system used for inventory control during MDA campaign
- Inaccurate recording of data on open bottles in the process of physical count for reverse logistics
- Limited accuracy of stock balance after MDA campaign

#### **Opportunities**

- Improve connectivity between CMAM and DTN program
- Expanding inventory visibility from CMAM to DTN program
- Improving inventory accountability to WHO/donors

#### Challenges

- Standardize MDA processes
- Automate MDA campaign processes
- Improve inventory accuracy by reconciling number of treatments and SkU

# Tanzania e-Logistics Management Information System (eLMIS)

Matiko Machagge Senior Advisor – Supply Chain Technical Support Mechanism Project

#### **About this template....**

Please use this template when creating your presentation for the last mile virtual stakeholder meeting.

Keep your presentation to less than 10 minutes and no more than the three slides made available, unless you have a diagram, which can go on a 4<sup>th</sup> slide.

Introduce your presentation with a **short,** high level summary of the LMIS in your country and how it works. If eLMIS is in use, please provide some example of it.

## Summary of tools available as part of LMIS

| Levels   | Tools  | Purpose of tool  | Data Collected  | Utilization rate   |
|--|--|--|---|--|
| e.g. CMS, regional,<br>district, health facility,<br>CDD | e.g. paper based tools,<br>OpenLMIS, DHIS2,<br>eLMIS, eCHIS etc. | e.g. ordering, issuing, receiving, reporting data, displaying KPIs | e.g. opening balance, qty received, qty used, losses/adjustment, physical count | e.g. 100% in use, only partially used in some areas etc. |
| CMS/Medical<br>Stores<br>Department                      | ERP – Epicor 10  | Receiving from upstream SC, issuing to HF,W/House Mngmt            | Quantity ordered  | 100%   |
| Regional,<br>District, HF                                | eLMIS  | Reporting data,<br>ordering, displaying<br>some KPIs               | Opening balance, qty received, qty used,losses/adjustmen ts and end balance     | 100%   |
| CDD  | Paper based tools  | Reporting medicines dispensed                                      | # of tablets dispensed,<br># of clients, end<br>balance                         | 100%   |

#### **Experience with eLMIS**

- Tanzania has been using eLMIS since 2014, it is an OpenLMIS platform and it is version 3. It has integrated all health supply chains except vaccines.
- NTD commodities have been integrated into the eLMIS and currently for MDAs, districts order through eLMIS and report back balances (although there are still challenges we are working to address)
- Currently, eLMIS is not integrated with HMIS, but it is linked with MSD-EPICOR 10 for order visibility and processing.
- The challenge for integrating NTD data into HMIS is the lack of digitization of data collection at the lowest level. The paper-based data is eventually entered into the system at the district level.

#### **SWOT** analysis

- Include a few bullet points on the strengths of the LMIS tool/s
  - eLMIS rolled countrywide and used by all HF
  - Has integrated all commodities including NTD commodities
  - There are standard paper-based tools for NTD to capture data during MDAs

- What opportunities does using this LMIS tool/s provide (that have, or have not, been utilized)
  - Simplification and digitization of data collection and tools that could be integrated with eLMIS

- Include a few bullet points on the weakness of the LMIS tool/s
  - There are different tools for each disease making it tiresome for users
  - The eLMIS system wasn't designed to capture nuances of NTD commodity management during and after MDAs
- What challenges (threats) are there to the utilization and scale up of the LMIS tool/s?
  - Constant training to CDD due to high turnover
  - Funding to print tools, training and supervision, and CDD retention to create experts

# Ghana Integrated Logistics Management Information System(GhiLMIS)-NTD MEDICINES

#### Introduction

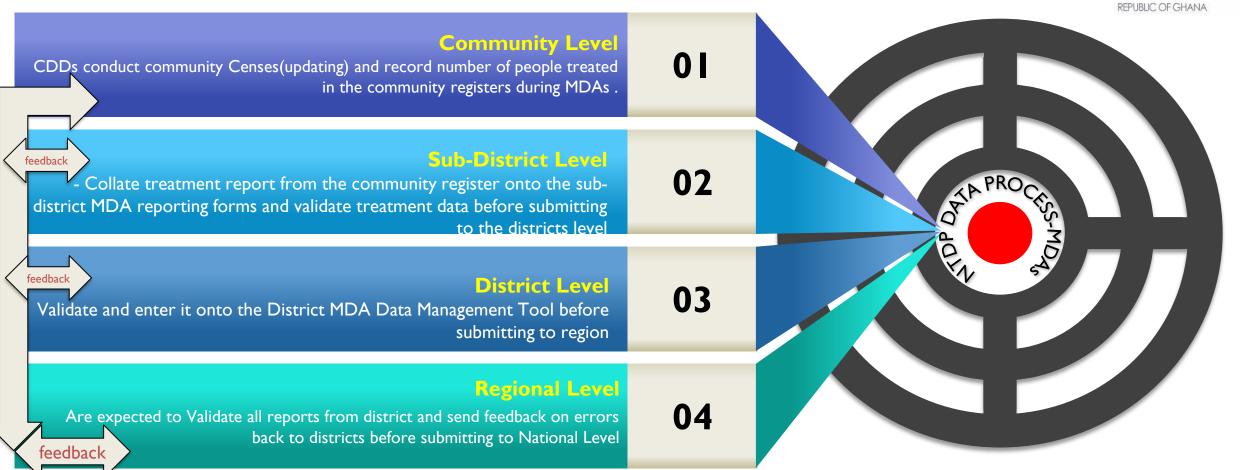

• NTD drugs has been integrated into the Ghana Integrated Logistics of Health Management Information System(GhiLMIS) which is implemented at the central, regional and districts tiers of Ghana's public health

 NTDs are diagnose in health care system across all level and are recorded in the consulting room register, which are reported on the monthly reporting form through the District health management information system(DHIMS 2)

#### Overview of MDA Data Process

## Summary of tools available as part of LMIS

| W WANTED |
|----------|
|          |
|          |
| FREEDOM  |

|   |                                 | A AIN HOTOV OF  | HEALTH |
|---|---------------------------------|---|--------|
| Tracking Tools                                    | Level of use                    | Process   | Α      |
| SIRV  | National, Regional and District | Use for recording quantities of drugs issued and/or received from one level to the other along the supply chain e.g. district |        |
| Waybill   | Central                         | To cover movement of commodities from issue level to the receiving level  |        |
| Inventory control cards / Bin cards / Tally cards | ,                               | To track receipts and issues of commodities along the supply chain at the respective levels                                   |        |
| Tally sheets                                      | Urban                           | To record individual drugs issued to clients during distribution  |        |

# Ghana Integrated Logistics Management Information System(GhiLMIS)

NTDP
Complete the JAP in collaboration with partners and CMS

Medicine goes to CMS CMS (Received, Store and distribute MDA Medicine to Regions)

**GhiLMIS** 

CDD Receive and Distribute Medicine to eligible population endemic communities

Sub-district receiver medicine distribute to CDDs by the use of **BIN Card** 

Your Health Our Concern

**RMS** (request, Received, store and Distribute MDA Medicine to Districts)

DMS or District Hospital (Request and redistribute to the sub districts) **BIN**Card are use for Management

#### Reverse Logistics and Waste Management

 Reverse logistics: supply chain process of returning NTD medicines from volunteers and health workers to the district, regional and national level

 In waste management NTD medicines are received from the lower levels quarantined for appropriate investigation to be conducted by the Stores Manager or Pharmacist and dispose off appropriately

# Reverse Logistics and Waste Management 1/3

#### Reverse Logistics and Waste Management

#### **Challenges**

 Lack of logisticians at the health centers and CHPS compounds to coordinate in the retrieval of medicines

Poor supervision at the sub regional levels on logistics

Adherence to last mile distribution

**Ghana Health Services** 

 Poor road network, transport arrangement and budgetary support for reverse logistics and waste management

#### Reverse Logistics and Waste Management

#### **Solution**

Provision of budget support for effective reverse logistics and waste management

 Adequate supervision from the regional and district level on reverse logistics and waste management

Enforce adherence to last mile distribution

# **THANK YOU**

Small group discussions on challenges and opportunities for integrating SCM logistics into LMIS

**Working Group Discussion** 

# Guidelines for Working Groups

**Objective Clarification**: Give inputs into the challenges of forecasting accurately, challenges in logistics management information systems, and provide inputs for three forecasting methodology

**Group Roles**: Assign specific roles within each group, such as a <u>facilitator</u>, and a <u>note-taker</u> to ensure a structured discussion and effective reporting. There will **be three separate discussion sessions** during the day. Be sure to only focus on the questions that are in discussion for that session, do not move to discussion questions for the next sessions.

**Time Management**: Keep track of time for each question. This will help keep the discussion focused and balanced.

#### **Focus Areas:**

- 1. Forecasting accuracy challenges and opportunities slide 3
- 2. LMIS challenges and opportunities slide 4
- 3. 3-year forecasting methodology slide 5, 6 and 7

**Reporting Back:** Each group should prepare to present their answers to the larger group. Encourage them to highlight the most critical issues and realistic solutions.

### Session 2: Discussion Questions: LMIS

Question 1: What are challenges with collecting logistics data at country level?

**Question 2:** What are the opportunities for strengthening LMIS and integrating LMIS?

# Plenary discussion: Challenges & Opportunities for LMIS integration

**Working Group Discussion** 

# Lunch break

## **Long Term forecasting for PC-NTDs**

Matiko Machagge Senior Advisor – Supply Chain Technical Support Mechanism Project

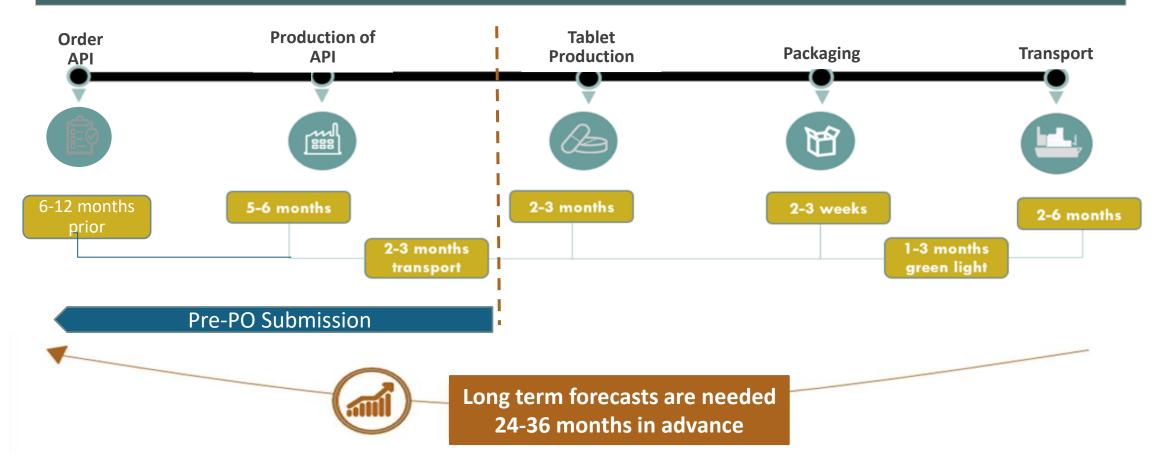

# Long Term Forecasts for Donated PC Medicines

#### Longer-term forecasts at country level could:

- Be shared with global level (pharm partners) to support production planning and enable pharmaceutical companies to better respond to country requests
- Empower NTD Programs with information to plan and advocate
  - Some NTD donation programs target specific population subgroups (e.g. SAC, WRA, etc.), yet the need extends beyond these subgroups, forecasting the full need allows programs to advocate and plan
  - If donor support and funding for NTD commodities decreases, there may be a transition to government-led procurement
- Forecast potential changes in commodity needs due to changes in epidemiology and treatment guidelines for PC and case management which could results for large and rapid shifts in future demand

#### Pharmaceutical Manufacturing Process & Time-lines

## Pharma Partners

| Johnson & Johnson | Mebendazole  | 200 000 000 tablets<br>annually    | Soil-transmitted<br>helminthiases (SAC) <sup>2</sup> | Until 2025                     | WHO                          |  |
|-------------------|--------------|------------------------------------|--|--------------------------------|------------------------------|--|
| GlaxoSmithKline   | Albendazole  | 600 000 000 tablets<br>annually    | ,              |                                | WHO                          |  |

Small group discussions on challenges and opportunities for integrating SCM logistics into LMIS

**Working Group Discussion** 

# Guidelines for Working Groups

**Objective Clarification**: Give inputs into the challenges of forecasting accurately, challenges in logistics management information systems, and provide inputs for three forecasting methodology

**Group Roles**: Assign specific roles within each group, such as a <u>facilitator</u>, and a <u>note-taker</u> to ensure a structured discussion and effective reporting. There will **be three separate discussion sessions** during the day. Be sure to only focus on the questions that are in discussion for that session, do not move to discussion questions for the next sessions.

**Time Management**: Keep track of time for each question. This will help keep the discussion focused and balanced.

#### **Focus Areas:**

- 1. Forecasting accuracy challenges and opportunities slide 3
- 2. LMIS challenges and opportunities slide 4
- 3. 3-year forecasting methodology slide 5, 6 and 7

**Reporting Back:** Each group should prepare to present their answers to the larger group. Encourage them to highlight the most critical issues and realistic solutions.

# Session 3: 3-Year Forecast Methodology PC-NTDs E S P EN REGLET TO TO SE S P EN REGLET TO SE S P EN REGLET

The proposed methodology for 3-year forecasting is to use the data from 2025 JRSM and determine what will be change in 2026 and 2027. The questions on the next page are proposed to help calculate forecasts for 2026 and 2027.

#### **Group Work Directions:**

- 1. Review the questions on the following page.
- 2. Answer the following questions:
  - a) Are these the right questions?
  - b) Are there other questions to add? Would you change the order or wording of the current questions?
  - c) Are these questions feasible for countries to answer?
- 3. Add edits to the following page.

# Year Forecast Methodology PC-NTD

### Questions to answer by Implementation Unit by disease for each year - 2026/ 2027

- 1.Do you expect to have full funding for MDA?
  - 1. yes, maybe, no
- 2.Do you expect any changes to the population requiring MDA due to recent surveys?
  - 1. yes, no
- 2. If yes, what is the expected change stop MDA, decrease frequency twice to once a year
- 3.Do you expect to target new population groups?
  - 1. yes, no
  - 2. if yes, what will be the targeted populations (select groups)?
    - 1. Preschool age children, School age children, Women of reproductive age, Adults
- 4. For schisto, are you changing to a focal sub-IU? (Are there other diseases where this also applies?)
  - 1. yes, no
  - 2. if yes, enter new population targeted for this IU

# Additional Comments / Conclusions Expanded Special project for elimination of Neglected tropical diseases

### **Conclusions:**

# Innovation Lab: CrossRoads tool and Country Health Information Platform

Andy Tate & Alex Pavluck Sightsavers

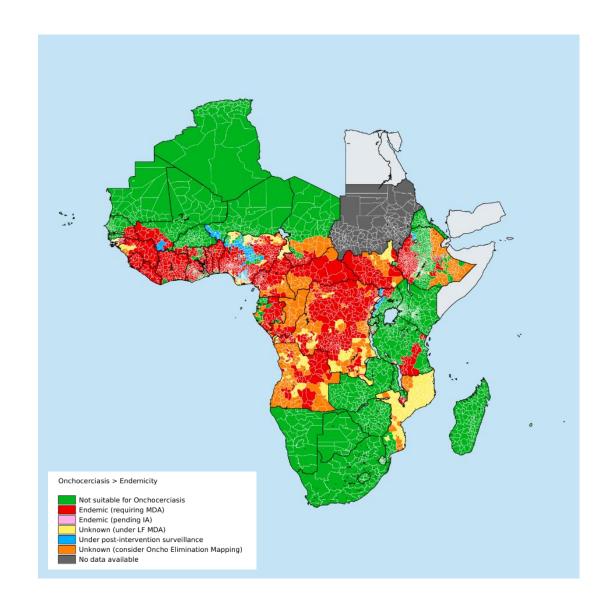

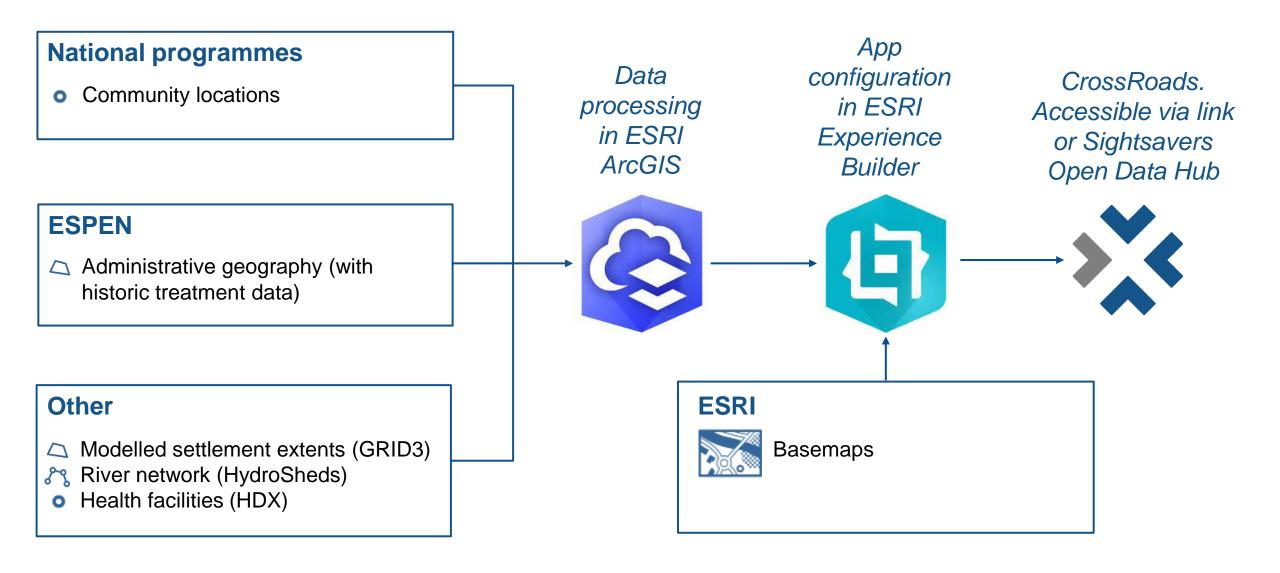

## The cross-border data challenge

### Diseases do not respect borders

National programmes recognize the need to collaborate to ensure no one is left behind. However, the effectiveness of these initiatives can be hindered by a lack of capacity to use geographic information systems to visualize data on communities and disease prevalence.

### CrossRoads Data Model

### What can I do with CrossRoads?

### **Standard capabilities**

Use in desktop, tablet or mobile format

Review ten data layers, supported by six basemaps

Access additional data through attribute tables and pop-ups

Measure distance and area

Identify coordinates

Run data queries and export results to Excel

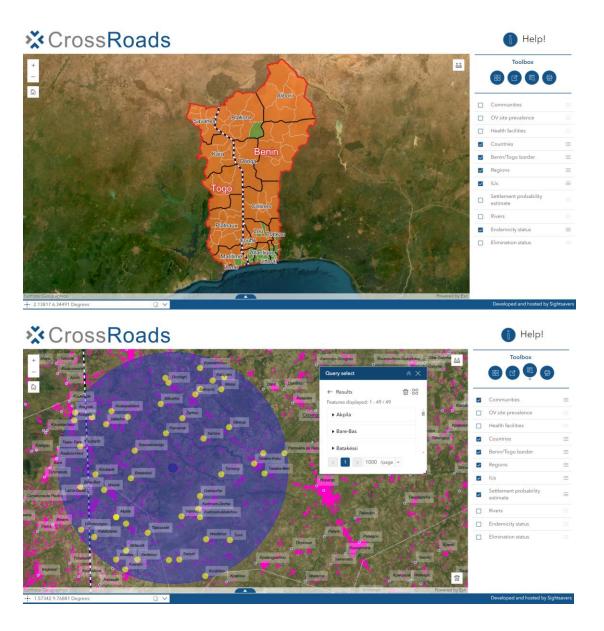

Print maps to .jpeg or .pdf template

### **Enterprise capabilities**

Edit community data directly

### Interested?

Please register your interest in CrossRoads at...

NTDtools@sightsavers.org

## Country Health Information Platform (CHIP)

An interactive national NTD dashboard to visually review data submitted on annual NTD reporting forms for treatments, morbidity management, and epidemiological surveys

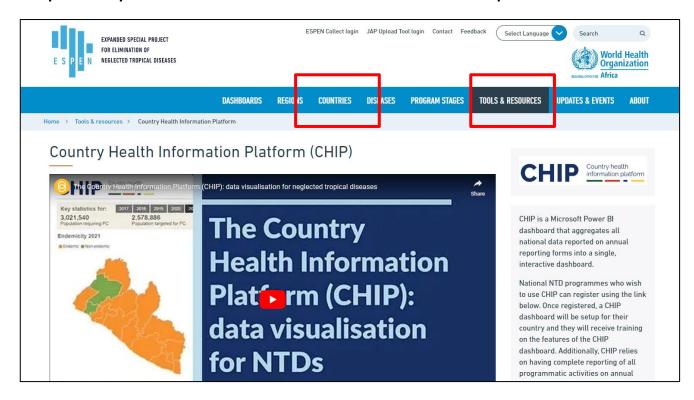

### What is CHIP

- CHIP is a publicly-accessible online business intelligence dashboard built using Microsoft Power BI
- All countries in the WHO AFRO region endemic for at least one of the PC NTDs have access to a CHIP dashboard

CHIP dashboards can be accessed via the ESPEN Portal either through the individual country page or through the CHIP page under Tools & Resources

#### https://espen.afro.who.int/tools-resources/chip

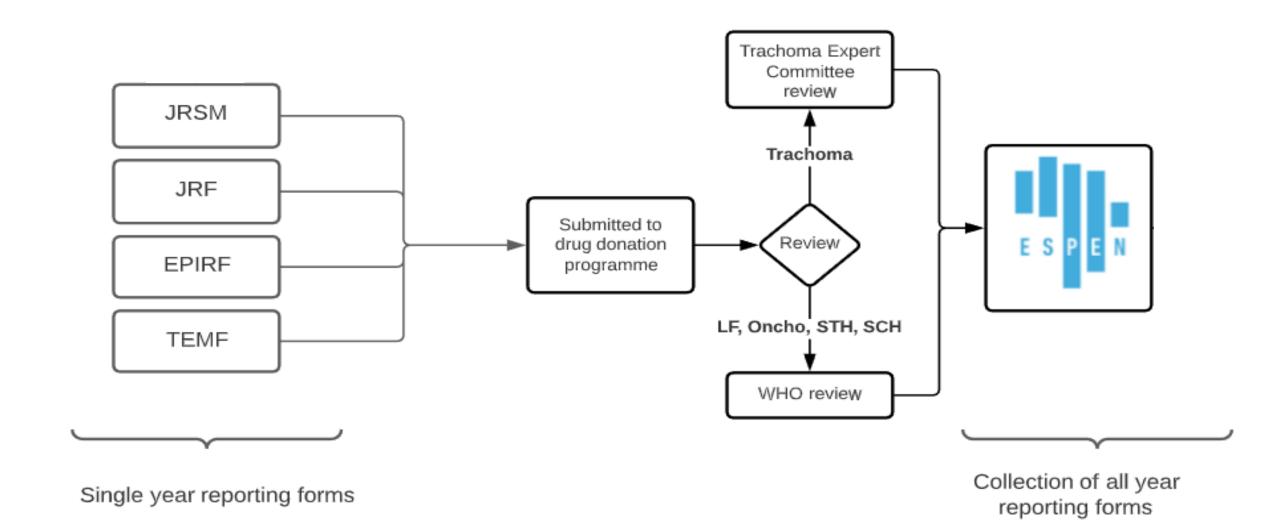

## Why is a tool like CHIP needed?

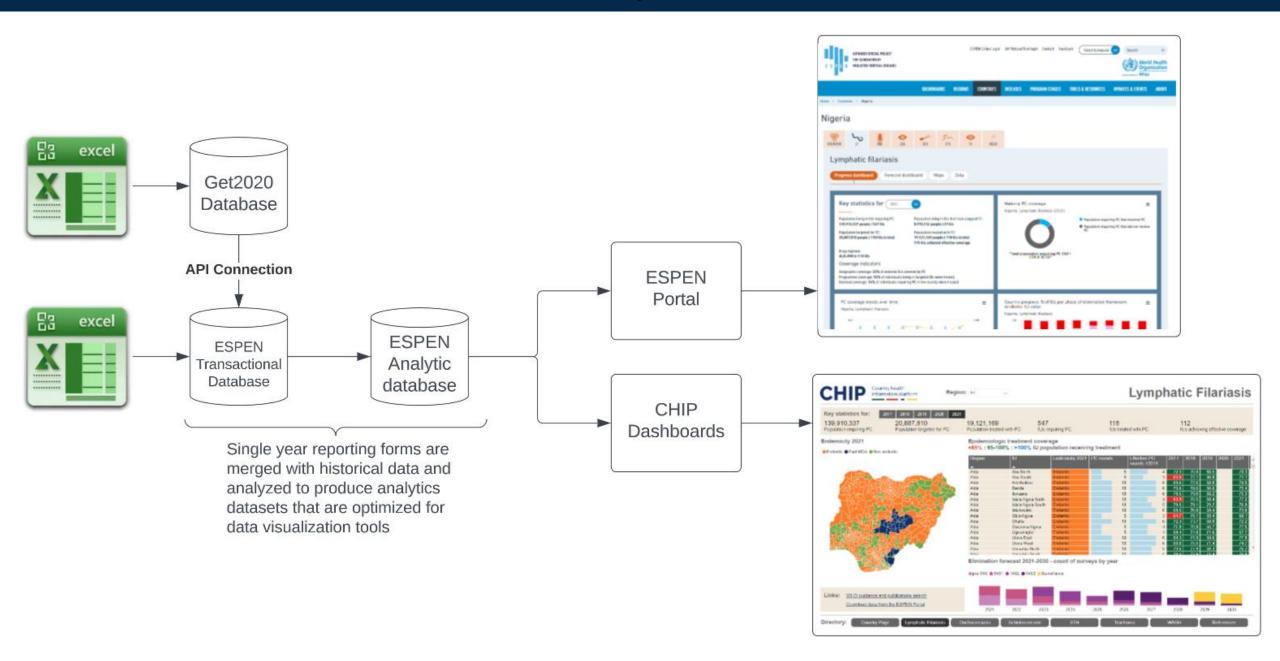

NTD programmes tend to **operate outside of health management information systems** for a variety of reasons.

- Because of this, NTD programmes need to develop their own databases to store programmatic data coming from surveys, morbidity management, inventory management, and mass drug administration treatments. This can be difficult for NTD teams, often comprised of disease subject matter experts with limited experience in implementing and maintaining data systems.
- However, each year national NTD programmes submit a wealth of programmatic data to WHO and the International Trachoma Initiative (ITI) to report on endemicity status, treatments delivered, surveys conducted, morbidity, and medicines required and remaining for the current reporting period. Taken in aggregate, these single year reporting forms provide a wholistic view of programmatic activities which need to be implemented over multiple years to interrupt disease transmission.

## CHIP data model 1: Country > ESPEN

## CHIP data model 2: ESPEN > Country

## Thank you

Designed and developed by Sightsavers with technical and financial support from:

Groups presenting results of Session 3: 3-year forecasting of medicine needs

# Group 1 – 3-year forecasting of medicine needs

# Vorld Health Segent Portion Segent Forecast Methodology PC-NTD FOR ELIMINATION OF NEGLECTED TROPICAL DISEASES

#### Questions to answer by Implementation Unit by disease for each year - 2026/2027

- 1. For schisto the disease, are you changing to a focal sub-IU?
  - 1. yes, no
  - 2. if yes, what is the new population targeted for this.

Remove reference to schisto as this is applicable cross-disease (group discussed from an LF perspective)

- 2. Is a survey required, and if so which survey type?
  - 1.Survey type
  - 2. Expected survey outcome (e.g. stop MDA, increase or decrease frequency or maintain)

Replace this question to better understand the IU survey plan by year - can the JAP template ultimately be extended to better capture this data for forthcoming years?

- 3. Which are the targeted population groups? (Note this will need to be aligned per disease)
  - 1. Preschool age children, School age children, Women of reproductive age, Adults

Responses above to be adjusted per disease as applicable

- 4. Do you expect to have full funding for MDA?
  - 1. yes, no, unconfirmed

Could link this in due course to IU planner for ease of completion/reference. Suggest to revise possible answers to Yes, No and 'unconfirmed' with these definitions outlined in far more detail to reduce ambiguity.

# **Group 2 – 3-year forecasting of medicine needs**

## Session 3: 3-Year Forecast Methodology PC-NTDs E S P EN NEGLECTED TROPICAL DISEASES

- a) Are these the right questions?
  - a) Yes, but they should be asked stratified by drug package instead of by disease to account for integrated delivery
- b) Are there other questions to add? Would you change the order or wording of the current questions?
  - a) Number of effective rounds to date? Number of expected additional rounds? That is often prioritized by funders
  - b) General remarks around anything else that may be relevant
  - c) Confidence rating related to every response
- c) Are these questions feasible for countries to answer?
  - a) There will be a number of assumptions behind each of these responses, so these need to be clear

# World Health Sorganization S Year Forecast Methodology PC-NTD S

#### Questions to answer by Implementation Unit by disease for each year - 2026/ 2027

- 1.Do you expect to have full funding for MDA?
  - 1. yes, maybe, no
    - 1. Responses will depend on many factors such as the number of effective rounds to date these could be added as columns
    - 2. Some level of certainty will be particularly important for this question; OR
    - 3. Is more nuance in the response options needed? E.g. funding status: funding in discussion, pending, approved?
- 2.Do you expect any changes to the population requiring MDA due to recent surveys?
  - 1. yes, no
  - 2. If yes, what is the expected change stop MDA, decrease frequency twice to once a year
    - Dependent on survey results and again there are a lot of assumptions here (likelihood of passing, % pass, etc)
    - 2. What do donors/pharma want? Worst case scenario or best case scenario? Based on survey type (e.g. LF/ONC stop and prestop surveys) there can be more or less certainty
    - 3. Add "Maybe" response
    - 4. Stratified by disease/drug package will be important here
    - 5. Make sure that the "if yes" responses should allow for intensification of treatment strategy as well
    - 6. Rewording to not specify "due to surveys" but to expand to all factors

# World Health Sear Forecast Methodology PC-NTD

#### Questions to answer by Implementation Unit by disease for each year - 2026/ 2027

- 1.Do you expect to target new population groups?
  - 1. yes, no
  - 2. if yes, what will be the targeted populations (select groups)?
    - 1. Preschool age children, School age children, Women of reproductive age, Adults
      - 1. Add "other groups" to the targeted population groups e.g. refugee camps
      - 2. Add maybe option, or some other column that indicates the certainty of the response
- 2. For schisto, are you changing to a focal sub-IU? (Are there other diseases where this also applies?)
  - 1. yes, no
  - 2. if yes, enter new population targeted for this IU
    - 1. Should be stratified by disease where applicable and it should include endemicity
    - 2. Look at number of rounds and co-endemicity
    - 3. Treating with STH? Then ALB/MEB (info page / assumptions)

# **Group 3 – 3-year forecasting of medicine needs**

## Additional Comments / Conclusions !!!!

### **Conclusions:**

- We believe that there may be a need to tailoring some of these questions to be disease specific. For example, SCH has its own set of considerations.
- There is a need to introduce information on endemicity which can be auto=populated from the JRSM. Endemicity is required because it often dictates number of rounds, treatment frequency and target populations for SCH, for example.
- There should be a preliminary question on the number of effective rounds of MDA that
  have Been conducted in the past, which could be auto-populated from the JRF. Is an
  additional round of MDA required in the coming year? Is the IU due fo assessment in the
  coming year?
- The first question should also ask how many rounds of MDA are envisioned and if full funding is secured for all rounds planned in the IU? (Sometimes different rounds of MDA are funded by different partners) The answer could be yes, no, or partial (i.e., one round funded but not the other)

# Groupe 4 – Prévisions sur 3 ans des besoins en médicaments

## Session 3 : Méthodologie de Prévision sur 3 Ans pour les PC-NTD

La méthodologie proposée pour les prévisions sur 3 ans consiste à utiliser les données du JRSM 2025 et à déterminer ce qui changera en 2026 et 2027. Les questions à la page suivante sont proposées pour aider à calculer les prévisions pour 2026 et 2027

#### Directives pour le travail en groupe :

1. Passez en revue les questions à la page suivante.

#### 2. Répondez aux questions suivantes :

- S'agit-il des bonnes questions ? Oui, clarifier ce qui est attendu par financement complet pour la question 1(disposer d'un financement de toutes les activités en lien avec les MDAs)
- Y a-t-il d'autres questions à ajouter ? Changeriez-vous l'ordre ou la formulation des questions actuelles ? Oui, nous avons ajoute 2 nouvelles questions,
- Ces questions sont-elles réalisables pour les pays ? Oui
- 1. Apportez des modifications à la page suivante.

## 3 Year Forecast Methodology PC-NTDs I S NEIGH TROJECT MEDICAL DISEASE TO SECULL PROJECT A PROJECT S TO SECULL PROJECT A PROJEC

Questions à répondre par l'Unité de Mise en Œuvre par maladie pour chaque année - 2026/2027

- 1.Attendez-vous à disposer d'un financement complet pour la MDA? Bonne question.
  - 1. oui, peut-être, non
- 2.Attendez-vous des changements dans la population nécessitant la MDA en raison des enquêtes récentes/ Données récentes? Bonne question.
  - 1. oui, non
    Si oui, quel est le changement attendu?
  - 2. arrêter la MDA, réduire la fréquence de deux fois à une fois par an, augmenter la fréquence, maintenir la fréquence, reprise du MDA
- 3. Attendez-vous à cibler de nouveaux groupes de population ? Bonne question.
  - 1. oui, non Si oui, quelles seront les populations ciblées (sélectionnez les groupes) ?
  - 2. Enfants d'âge préscolaire, Enfants d'âge scolaire, Femmes en âge de procréer, Adultes, groupes spécifiques

## 3 Year Forecast Methodology PC-NTDs Let Replaced Project A Project

Questions à répondre par l'Unité de Mise en Œuvre par maladie pour chaque année - 2026/2027

- 4. Pour la schistosomiase, passez-vous à une sous-UMI focale ? (Cela s'applique-t-il également à d'autres maladies ?) Bonne question.
  - 1. oui, non Si oui, entrez la nouvelle population ciblée pour cette UMI

Avez-vous prévu de faire des enquêtes dans cette zone sur les 3 prochaines annees? (Cela s'applique-t-il également à d'autres maladies ?).

1. oui, non, peut-être

Prévoyez- vous un changement dans les objectifs programmatique du pays sur les 3 prochaines années? (Cela s'applique-t-il également à d'autres maladies ?).

1. oui, non, peut-être

Prévoyez- vous un conflit ou des déplacements de population en masse dans ce districts sur les 3 prochaines années? (Cela s'applique-t-il également à d'autres maladies ?).

1. oui, non, peut-être (réfléchir a une strategie pour majorer la population a traiter dans cette zone)

# Groupe 5 – Prévisions sur 3 ans des besoins en médicaments

## 3 Year Forecast Methodology PC-NTDs \*\*\* EXPANDED SPECIAL PROJECT FOR ELIMINATION OF THE PROJECT PROPERTY OF THE PROJECT PROPERTY OF THE PROPER

Questions à répondre par l'Unité de Mise en Œuvre par maladie pour chaque année - 2026/2027

- 1. Attendez-vous à disposer d'un financement complet pour la MDA?
  - Question bien formulée
- 2. Attendez-vous des changements dans la population nécessitant la MDA en raison des enquêtes récentes ?

Question bien formulée, mais il faudra ajouter la réponse 3 et 4

- 1. oui
  - Si oui, quel est le changement attendu?
- 1. réduire la fréquence de deux fois à une fois par an
- 2. Arrêter le MDA
- 3. Augmentation le nombre de tour
- 4. Reprendre le MDA
- 3. Attendez-vous à cibler de nouveaux groupes de population ?

Question bien formulée

- 1. oui
  - Si oui, quelles seront les populations ciblées (sélectionnez les groupes) ?
- 1. Enfants d'âge préscolaire, Enfants d'âge scolaire, Femmes en âge de procréer, Adultes

## 3 Year Forecast Methodology PC-NTDs of the EXPANDED SPECIAL PROJECT FOR ELIMINATION OF THE NEGLECTED TROPICAL DISEASES

4. Pour la schistosomiase, passez-vous à une sous-UMI focale ? (Cela s'applique-t-il également à d'autres maladies ?) question bien formulée,

Si oui, entrez la nouvelle population ciblée pour cette UMI

## Coffee break
